

**INDUSTRIAL HYGIENE AND VENTILATION ASSESSMENT  
U-HAUL REGIONAL SERVICE AND SALES FACILITY  
DARTMOUTH, N.S.**

**OCL Group** was retained to undertake an industrial hygiene and ventilation assessment of the regional facility consisting of a 6-bay service area and adjacent office/sales area. The study was conducted in support of worker complaints related to vehicle fumes.

Monitoring within the service area consisted of an assessment of the ventilation system and measurements for CO and CO<sub>2</sub>. Monitoring was conducted at various times to represent different workloads and emission quantities. A report was prepared for management and presented to an ad-hoc committee that included an employee.
