

**ASSESSMENT AND REMEDIATION OF  
INDOOR ENVIRONMENTAL QUALITY:  
SIR HENRY LOUIS DAVIES LAW COURTS  
CHARLOTTETOWN, PRINCE EDWARD ISLAND**

**OCL Group** was retained by the PEI Government to assess and identify indoor air quality problems in the Davies Law Courts building. Intensive investigation showed a combination of problems related to particulate in one section that had been built around an old warehouse, fugitive entry of dirt, dust and furnace gases in another area due to building envelope problems and problems related to mould in old documentation in the Vault that had suffered water ingress and damage. OCL worked with a local architecture to address IAQ problems during design of building renovations. Pre-occupancy and post-occupancy surveys were undertaken to ensure IAQ of building met the criteria set through consultation with building occupants.
