

## IAQ OF INTENSIVE CARE UNIT AND MEDICAL UNIT, PRINCE COUNTY HOSPITAL SUMMERSIDE, PRINCE EDWARD ISLAND

**OCL Group** was retained to investigate IAQ issues in the Intensive Care Unit and adjacent Medical Unit on Level 4 of the Prince County Hospital. The primary problem was mould contamination related to plumbing leaks and poorly ventilated shower and bathrooms. The moulds were then drawn into the special air-handling unit for the ICU. A secondary problem was the extensive use of glutaraldehyde as a disinfecting agent.

A detailed remedial plan was developed in consultation with the Health Authority and OCL was also retained to supervise/monitor implementation of the Plan.

*Client: East Prince Health Authority and PEI Dept. of Transportation and Public Works*
